To Get Things Done

Business Telecommunication Solutions

IP Networking:

- Connect multiple sites via a managed data network to build a large, effective and seamless virtual telephone systems, including centralized voice mail.
- Connect remote workers/telecommuters and small offices to the centralized telecommunication hub that allows detached employees the full capabilities of the main telecommunication system.

Multi-Cell Wireless Network—Stay connected even when you are away from your desk. Strategically placed base stations/towers create a seamless communication coverage area within which employees can make and received calls with digital wireless telephone sets. No more missed calls, no more searching for managers. Enhanced communication improves productivity and improved customer satisfaction.

Unified Messaging—Manage (view/listen, forward and file) all forms of communication (faxes, voice messages, and e-mails) from MS Outlook or other e-mail client.

Phone Assistant (A communication enhancement desktop software application):

- Manage incoming and outgoing calls including dialing from a database or MS Outlook
- Control all telephone system functions including recording a call, transferring, etc.
- Set/View others presence status
- Instant message other users
- Answer door intercom/view Panasonic Network Camera/activate opener

Conferencing—Conference up to 8 parties into a single conference call saving on travel or outside conferencing service cost.

Door Intercom/Opener—Maintain a high level of security with an external door intercom at all locked doors. Intercom call button rings selective telephones with a distinctive ring. Opener can allow door access from any telephone. Combine with Panasonic Network Cameras to view guest before opening door.

Management Control—Maintenance software allows complete programming capability for an administrator's office computer or any computer via the Internet.
